

**Calendar-thematic plan for students of the 4th year of treatment  
and foreign faculties on the subject «Dermatovenereology»  
for 2023-2024 academic year**

Nº	Lecture topics	Hours
1.	General clinical signs and pathomorphology of dermatoses. Primary and secondary morphological elements. Methods of examination of patients with skin and venereal diseases. General and local principles of treatment.	2
2.	Pyoderma, acne, dermatosis,	2
3.	Dermatitis. Eczema. Toxicoderma. Hives.	2
4.	Papular dermatoses. Neurodermatosis	2
5.	Sexually transmitted infections. General course of syphilis, modern classification, microbiology and epidemiology of syphilis. Primary, secondary, tertiary, congenital syphilis.	2
<b>Total</b>		<b>10</b>

Nº	Practice topics	Hours
1.	General clinical signs and pathomorphology of dermatoses. Anatomy and histology of the skin and mucous membranes. Methods of examination of patients with skin and venereal diseases. Endogenous and exogenous factors in the development of dermatoses. Primary and secondary morphological elements. General and local principles of treatment. Anatomical and physiological features of the skin in childhood.	4
2.	Pyoderma. Acne. Dermatozoanoses. Clinical classification of pustular skin diseases. Strepto- and staphylococcal dermatitis. Scabies. Lice.	4
3.	Allergodermatoses. Dermatitis. Toxicoderma. Simple and contact dermatitis. Toxicoderma, sulfanilamide erythema. Multiform exudative erythema. Hives.	4
4.	Eczema. Neurodermatosis. True, microbial, seborrheic, occupational and childhood eczema. Atopic dermatitis (neurodermatitis). Scabies.	4
5.	Papular dermatoses. Psoriasis. Parapsoriasis. Lichen planus.	6
6.	Viral infections of the skin. AIDS. Simple herpes. Shingles. Molluscum contagiosum. Pointed warts. Warts. Skin diseases in AIDS.	6
7.	Bullous dermatoses. Acantholytic pemphigus. Duhring's dermatitis herpetiformis. Lever's pemphigoid	6
8.	Fungal infections of the skin. Keratomycosis, dermatomycosis. Candidiasis, onychomycosis	6
9.	Leprosy, cutaneous leishmaniasis, skin tuberculosis	6
10.	Collagenoses. Scleroderma. Lupus erythematosus. Dermatomyositis	6
11.	Sexually transmitted infections. primary syphilis. General course of syphilis, modern classification of STIs, microbiology, epidemiology and etiopathogenesis of syphilis. Immunity in syphilis. Clinical laboratory and serological diagnostic	4

12.	<b>Secondary syphilis.</b> Latent syphilis. Principles of treatment and clinical examination of patients with syphilis. Active case finding and serological control.	4
13.	<b>Tertiary syphilis. congenital syphilis.</b> Damage to the internal organs and nervous system in syphilis.	6
14.	<b>Gonorrhreal and non-gonorrhreal urethritis.</b> Complicated and uncomplicated forms of gonorrhea. Trichomoniasis. Chlamydia. Ureaplasmosis	6
15.	<b>Fundamentals of oncidermatology. precancerous diseases.</b> Benign and malignant tumors of the skin. Cheilitis.	6
	<b>Total</b>	<b>80</b>

Nº	Independent work	Hour
1.	Seborrheic dermatitis. Rosacea	4
2.	Pustular diseases of infants.	4
3.	Syndromes of Lyell and Stevens-Johnson.	4
4.	Professional dermatoses.	5
5.	Parapsoriasis. Modern aspects of quantum therapy (PUVA, laser therapy) in the treatment of psoriasis and other dermatosis.	4
6.	Atypical forms of psoriasis and lichen planus	4
7.	Application of ozone therapy in dermatology.	4
8.	Pink deprive Zhibera. Devergie disease.	4
9.	Kaposi's sarcoma. Kaposi's eczema.	4
10.	Deep mycoses	4
11.	Application of IFA and PCR methods in dermatovenereology.	4
12.	Diseases of cheyli-cheyli	4
13.	Modern methods of treatment of alopecia.	4
14.	Tuberculoid form of leishmaniasis, visceral leishmaniasis.	4
15.	Xanthelasma. Lipomas. Hygroma.	4
16.	Chancroid. Venereal lymphogranuloma. Donovanose..	4
17.	The concept of the malignant course of syphilis.	4
18.	Complicated and uncomplicated forms of gonorrhea.	4
19.	Bacterial vaginosis. Toxoplasmosis.	4
	<b>Total</b>	<b>67</b>
